

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	HENRY MAYO NEWHALL HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106190949
Report Period:	1/1/2024 - 12/31/2024
Status:	Submitted
Due Date:	09/30/2025
Last Updated:	09/29/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	henrymayo.com/equityreport

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

75934

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	73071	75934	96.2
Spanish Language	2565	75934	3.4
Asian Pacific Islander Languages	94	75934	0.1
Middle Eastern Languages	97	75934	0.1
American Sign Language	suppressed	75934	suppressed
Other Languages	suppressed	75934	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

N

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

N

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

3059

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

8999

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

34

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	26	0.9	0	
Housing Instability	53	1.7	0	
Transportation Problems	33	1.1	0	
Utility Difficulties	34	1.1	0	
Interpersonal Safety	14	0.5	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

531

Total number of respondents to HCAHPS Question 19

583

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

91.1

Total number of people surveyed on HCAHPS Question 19

3239

Response rate, or the percentage of people who responded to HCAHPS Question 19

18

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language					
Spanish Language					
Asian Pacific Islander Languages					
Middle Eastern Languages					
American Sign Language					
Other/Unknown Languages					

Disability Status	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Does not have a disability					
Has a mobility disability					
Has a cognition disability					
Has a hearing disability					
Has a vision disability					
Has a self-care disability					
Has an independent living disability					

Sexual Orientation	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Lesbian, gay or homosexual					
Straight or heterosexual					
Bisexual					
Something else

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

490

Total number of respondents to HCAHPS Question 17

583

Percentage of respondents who responded "yes" to HCAHPS Question 17

84

Total number of people surveyed on HCAHPS Question 17

3239

Response rate, or the percentage of people who responded to HCAHPS Question 17

18

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

25

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

486

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

51.4

Table 5. Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of in-hospital deaths that meet the inclusion/exclusion criteria	Number of hospital discharges that meet the inclusion/exclusion criteria	Rate of in-hospital deaths per 1,000 hospital discharges that meet the inclusion/exclusion criteria (%)

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

910

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

1280

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

1012

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

8062

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

12.6

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	5	3.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	5	2.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	6.3	2.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	6.3	2.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	5	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth			Female	9.2	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	10.4	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	10.4	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Female	11.5	1.2
Agency for Healthcare Research and Quality (AHRQ) Quality Indicator Pneumonia Mortality	Sex Assigned at Birth			Female	48	1.1

Plan to address disparities identified in the data

Health Equity Task Force Overview

Our hospital has launched a Health Equity Task Force, led by the VP of Clinical Support Services, to address health-related social needs and promote equity. This multidisciplinary team, comprising of leaders from Nursing, HR, IT, Quality & Safety, Clinical Informatics, Decision Support, Professional Development, and Case Management, developed a strategic Health Equity Action Plan.

Key Initiatives Include:

Updating anti-discrimination policies

Collecting preferred patient language, demographic SDOH data, Universal screening for five core social needs: housing, food, transportation, utilities, and safety

Identifying priority populations and equity goals

Allocating resources for equity initiatives

Training staff in culturally sensitive data collection

Documenting SDOH in the EHR

Engaging in disparity-focused quality improvement

Tracking KPIs by demographic factors

The Task Force meets regularly to monitor progress, address gaps, and drive continuous improvement, reflecting our commitment to equitable care for all patients.

Implementation Timeline:

Jan-Feb: Finalize screening tools, workflows, and dashboard updates

Mar: Train all staff; complete annual modules on SDOH and cultural sensitivity
Apr: Launch RN screening and LCSW intervention tools
May-Jul: Evaluate interventions, refine workflows, and validate dashboard data
Aug-Dec: Fully integrate into EHR, sustain reporting, and review data monthly

Metric to address each of the top 10 disparities: At least 90% of all patients will be screened for SDOH; 80% of patients with positive screens will receive documented intervention and follow up by LCSW prior to discharge.

- 1.HCAI All-Cause Unplanned 30-Day Readmission Rate Age 65 and older (15%) greater than reference group Age 18-34 (reference rate of 4.9) with a rate ratio of 3.1
Goal: Reduce patients aged 65 and older readmission rate by 1%
- 2.HCAI All-Cause Unplanned 30-Day Readmission Rate Age 50-64 (rate of 13) greater than reference group Age 18-34 (reference rate of 4.9) with a rate ratio of 2.7
Goal: Reduce patients aged 50-64 readmissions by 1%
- 3.HCAI All-Cause Unplanned 30-Day Readmission Rate Medicare Payor (rate of 15.5) greater than reference group Private Payor (reference rate of 6.0) with a rate ratio of 2.6
Goal: Reduce Medicaid readmissions by 1%
- 4.HCAI All-Cause Unplanned 30-Day Readmission Rate Medicaid Payor (rate of 13.9) greater than reference group Private Payor (reference rate of 6.0) with a rate ratio of 2.3
Goal: Reduce Medicaid readmissions by 1%
- 5.HCAI All-Cause Unplanned 30-Day Readmission Rate Age 35-49 (rate of 8.2) greater than reference group Age 18-34 (reference rate of 4.9) with a rate ratio of 1.7
Goal: Reduce patients aged 35-49 readmissions by 1%
- 6.HCAI All-Cause Unplanned 30-Day Readmission Rate (no behavioral health diagnosis) Male (rate of 12.2) greater than reference group Female (reference rate of 8.7) with a rate ratio of 1.4
Goal: Reduce Male readmissions by 1%
- 7.HCAI All-Cause Unplanned 30-Day Readmission Rate Male (rate of 13.4) greater than reference group Female (reference rate of 10.9) with a rate ratio of 1.2
Goal: Reduce Male readmissions by 1%
- 8.HCAI All-Cause Unplanned 30-Day Readmission Rate White (rate of 12.4) greater than reference group Hispanic or Latino (reference rate of 10.3) with a rate ratio of 1.2
Goal: Reduce White readmissions by 0.5%
- 9.HCAI All-Cause Unplanned 30-Day Readmission Rate Asian (rate of 12.0) greater than reference group Hispanic or Latino (reference rate of 10.3) with a rate ratio of 1.2
Goal: Reduce Asian readmissions by 0.5%
- 10.AHRQ Indicator Pneumonia Mortality Rate Male (rate of 52) greater than reference group Female (reference rate 48) with a rate ratio of 1.1
Goal: Reduce Male pneumonia mortality by 1% in the calendar year 2026.

Based on State benchmark of 12.99% for overall 30-day hospital-wide all-cause unplanned readmission, our hospital rate for 2024 is below that of California hospitals at 12.55%. Historically, based on state benchmark of 13.13% from January 2020 through December 2024, our 30-day hospital-wide all-cause unplanned readmission rate is 11.99%.

Based on a state benchmark of 59.9% for AHRQ Indicator Pneumonia Mortality Rate, our hospital rate for 2024 is below that of California Hospitals at 51.4%. Furthermore, based on a state benchmark of 64.3% for AHRQ Indicator Pneumonia Mortality Rate amongst males, our hospital rate for 2024 is below that of California Hospitals at 55.1%. We have kept these metrics in mind when establishing realistic goals for the organization.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Community Engagement & Patient-Centered Care Initiatives

Community Health Needs Assessment

Gather demographic data from our service area

Interview community stakeholders to identify key health issues, barriers, and community impact

Patient Voice in Care Planning

Leadership Rounding: Daily check-ins with patients to ensure involvement and personalized care

Bedside Shift Report: Patients participate in care planning during shift changes

Patient Journals Pilot: Launched in 2025 to support engagement through note-taking and interactive content

Patient Experience Data

Post-discharge surveys stratified by race, ethnicity, and language

Feedback used for service recovery and continuous improvement

Interpreter Services & Culturally Tailored Materials:

24/7 interpreter access via phones and tablets

Multilingual discharge instructions

Family-Centered Care Policy promoting inclusive, culturally sensitive communication

2026 Improvement Strategy:

Redesign patient whiteboards to reduce jargon and include prompts like:

"What do I need to go home?"

"What can I expect today?"

Patient safety

Commitment to Patient Safety & Equity

Our organization prioritizes patient safety through culturally responsive care, data-driven decisions, and inclusive engagement.

Culture & Staff Engagement

Safety stories shared at committee and board meetings to promote transparency

All staff complete annual training in DEI and SDOH, with CEUs offered to encourage participation

Equity-Focused Safety Monitoring

Quarterly data submitted to CHPSO, analyzed by ethnicity and sex to identify disparities

Harm event reviews (e.g., falls, HAPIs, mortality) include demographic data to ensure equity is considered

Patient & Family Engagement

Caregiver training offered for patients with post-discharge needs

Patient Care Committee includes community members for diverse input on safety and quality

Clinical Safety Enhancements

Pharmacy alerts prevent duplicate therapies

EMR decision support flags dosing errors and drug-lab interactions

Electronic prescriptions improve discharge safety

Continuity of care strengthened for patients on medication pumps

90% of patients receive medication reconciliation within 1 hour of admission decision

Increased provider compliance in reviewing home meds within 24 hours

Addressing patient social drivers of health

Advancing Health Equity Through SDOH Screening

In 2024, only 34% of patients were screened for five core social needs: food, housing, transportation, utilities, and safety, primarily by Case Management, limiting reach and impact.

To close this gap, we embedded SDOH screening into the RN admission workflow. Positive screens now trigger automatic alerts to Social Work for timely intervention, with daily oversight by Case Management leadership.

Results:

Screening rates increased to over 90% of admitted patients

Validated tools used to identify needs early

Patients referred to community resources for support

Disparity Insights (per HCAI reporting):

Greatest unmet needs found among:

Publicly insured patients (Medicare/Medicaid)

Individuals aged 65+

Male patients

This initiative strengthens our Equity Plan by integrating social context into care, identifying disparities, and targeting interventions to improve outcomes.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Embedding Equity in Clinical Effectiveness

Our organization integrates evidence-based, culturally responsive practices to reduce treatment disparities and improve outcomes.

Key Initiatives:

ERAS Protocols: Minimized opioid use to reduce fall risk and readmissions, especially in older adults

Ambien Adjustments: Lowered dosing for elderly and female patients; eliminated scheduled use to reduce adverse effects

Order Set Updates: Aligned with best practices and equity-focused decision support

Mobility Program: Promotes early and safe mobilization with improved outcomes across age subgroups

Provizio SEM Scanner: Enables early, objective detection of pressure injuries across all skin tones, reducing diagnostic disparities

Quiet at Night Pilot: Bundled care and scheduled quiet hours to support rest and recovery

Continuity of Care Enhancements:

Individualized care plans based on diagnosis and risk factors

Timely discharge planning with follow-up scheduled within 7-10 days (or 48-72 hours for high-risk patients)

Pharmacist-led medication reconciliation at admission

Provider accountability for reviewing home meds within 24 hours

Patient and family education to support understanding and adherence

These efforts reflect our commitment to equitable, patient-centered care guided by performance metrics and subgroup analysis.

Care coordination

Equitable Care Coordination & Transitions

Our organization strengthens care coordination to ensure smooth transitions and equitable access to post-acute services, especially for high-risk and diverse populations.

Key Strategies:

Strong partnerships with outpatient services (e.g., cardiac rehab, therapy, wound care, infusion, primary care) support seamless inpatient-to-outpatient transitions

Comprehensive referral system includes:

Direct coordination with home health agencies

Family meetings and social work follow-ups

Targeted support for high-acuity patients with limited resources

Multidisciplinary Rounds (MDRs):

Facilitate real-time collaboration among care teams to create individualized, responsive care plans and ensure between-unit coordination.

Navigation & Support:

Navigators in Cardiac, Oncology, Stroke, and Palliative care guide patients through complex transitions

Social workers and case managers connect patients to community resources

Enhanced support for publicly insured patients facing access barriers

These efforts reflect our commitment to equitable, patient-centered care transitions that reduce readmissions and promote recovery.

Access to care

Improving Equitable Access to Care

We've taken proactive steps to reduce barriers and improve access for underserved and high-risk populations, focusing on transportation, insurance, and care coordination.

Key Actions:

Insurance Support: Case Management enrolls uninsured patients in Emergency Medi-Cal and assists with dual coverage for SNF and hospice needs

Housing Partnerships: Collaborations with Bridge-to-Home and Recuperative Care programs provide safe discharge options for unhoused patients

Caregiver Resources: Social Work connects families to support groups, IHSS applications, and bedside education in a culturally sensitive manner

Care Coordination Enhancements:

Individualized care plans based on diagnosis and risk factors

Follow-up appointments scheduled within 7-10 days (or 48-72 hours for high-risk patients)
Early pharmacist involvement for medication reconciliation
Physician review of home meds within 24 hours
Patient/family education to support adherence

These efforts embed equity into care transitions, helping ensure all patients receive timely, coordinated, and appropriate care regardless of socioeconomic status.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
